

Biology Curriculum (Secondary 4-6)

Supplementary Document

Jointly prepared by the Curriculum Development Council and the
Hong Kong Examinations and Assessment Authority

Recommended to be used with the Biology Curriculum and
Assessment Guide (Secondary 4-6)

Science Education Section, Education Bureau

2013

Introduction

The purpose of the revision is to provide space for enhancing the effectiveness of learning and teaching of Biology. This document is the result of a number of discussion sessions of the following committees.

- Working Group on the Review of Biology (S4-6) and Combined Science (Biology part) (S4-6) Curricula
- CDC-HKEAA Committee on Biology (Senior Secondary)

It is applicable for the Biology Hong Kong Diploma of Secondary Education (HKDSE) Examination in year 2016 and onwards. The explanatory notes in this document are by no means exhaustive nor intended to dictate the scope of learning and teaching at the classrooms. It is recommended to be used together with the *Biology Curriculum and Assessment Guide (Secondary 4-6)* jointly prepared by the Curriculum Development Council and the Hong Kong Examinations and Assessment Authority.

General Notes

In each topic, there is a table with the following parts:

- (1) Students should learn

This part lists the intentions of learning in the content domain of the curriculum. It outlines the major content areas of each topic and also indicates the knowledge and concepts that students should learn. This provides a basic framework upon which the learning and teaching activities can be developed.

- (2) Student should be able to

This part lists a range of learning outcomes to be achieved by students, with different levels of ability in the content domain of the curriculum. Whenever learning outcomes which draw on higher cognitive ability (e.g. evaluate, relate) are applicable, other learning outcomes drawing on lower cognitive ability (e.g. state, describe) are not listed. Students are expected to demonstrate the whole range of cognitive abilities and use these learning outcomes as the basis for self-evaluation. Teachers can also use these learning outcomes to set assessment tasks for monitoring the progress of learning.

(3) Suggested Learning and Teaching Activities

This part suggests activities that can be provided for students to enable them to achieve the learning outcomes. The list includes a wide range of activities, such as discussion, debate, practical work, investigations, information searching and projects. It should be seen as a guide for teachers rather than as an exhaustive or mandatory list. Teachers should exercise their professional judgment in selecting activities to meet the interests and abilities of their students. Where possible, the activities should be framed in the context of students' own experience, to enable them to make connections with scientific knowledge, society and the environment around them. Students will then be well equipped to apply scientific concepts, theories, processes, and values to situations in which they have to investigate and solve everyday problems.

(4) Curriculum Emphases

This part comprises Scientific Inquiry, Science–Technology–Society–Environment Connections, and the Nature and History of Biology. It outlines the generic skills, scientific process skills, values and attitudes that are highlighted in the topic. It also helps enhance students' understanding of the nature of scientific inquiry in biology, the interconnections between science, technology, society and the environment, and biology as a dynamic body of knowledge.

(5) Footnotes

This part is to clarify the learning and assessment focuses of certain curriculum contents.

COMPULSORY PART I. Cells and Molecules of Life

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>a. Molecules of life</p> <p>Water and inorganic ions (e.g. nitrogen, magnesium, calcium and iron)</p> <p>Biomolecules¹: carbohydrates, lipids, proteins and nucleic acids</p> <ul style="list-style-type: none"> • Building blocks • Functions 	<ul style="list-style-type: none"> • Relate the significance of water, inorganic ions and biomolecules to life. 	<ul style="list-style-type: none"> • Discuss whether life can exist without water, and the possible benefits of drinking mineral water or isotonic drinks. • Perform common biochemical tests (e.g. Benedict’s test, iodine test, grease spot test, and different types of test papers) to identify the presence of biomolecules in living tissues. 	<p>① Ask relevant questions, identify problems and formulate hypotheses for investigations related to cells and molecules of life.</p> <p>① Use appropriate instruments and proper techniques for carrying out practical work (e.g. food tests).</p> <p>② Be aware of the applications of biological knowledge of molecules of life in society.</p> <p>② Appreciate the role of science and technology in understanding the molecular basis of life.</p>
<p>b. Cellular organisation</p> <p>Discovery of cells</p>	<ul style="list-style-type: none"> • Appreciate the contribution of the technological development of the microscope to the discovery of cells. 	<ul style="list-style-type: none"> • Read articles about the discovery of cells. • Conduct a project to explore the contribution of the development of the microscope to the understanding of cells. 	<p>② Recognise that the development of microscopic technology, computing technology and image analysing technology may lead to the advancement of biological knowledge.</p> <p>③ Recognise the contributions of various people (e.g. Robert Hooke and Theodor Schwann) to developments in biology.</p>

¹ The following contents are not the learning and assessment focus: optical isomers, linear form of sugar molecules, structural differences of starch, glycogen and cellulose.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>Cell membrane</p> <ul style="list-style-type: none"> • Properties and functions <p>Sub-cellular structures and their functions</p> <ul style="list-style-type: none"> • Nucleus and chromosomes, endoplasmic reticulum, mitochondrion, chloroplast, cell wall and vacuole <p>Prokaryotic cells (e.g. bacterial cells) and eukaryotic cells</p>	<ul style="list-style-type: none"> • Use the fluid mosaic model to explain the properties and functions of cell membrane. • Appreciate the uses and limitations of scientific models. • Prepare temporary mounts of specimens for examination, and make observations and drawings under a light microscope. • Identify cell organelles as seen under light and electron microscopes. • Compare the cellular organisation of animal and plant cells. • Compare the sub-cellular organisation of prokaryotic and eukaryotic cells. 	<ul style="list-style-type: none"> • Construct a model to represent the structure of cell membrane (e.g. using tank and ping-pong balls). • Prepare temporary mounts of animal and plant tissues for examination under a light microscope. • Discuss the variations of the number of mitochondria in different tissues and cell types. • Examine electron micrographs or live cell images of prokaryotic, eukaryotic cells and sub-cellular structures. 	<ul style="list-style-type: none"> ① Plan and conduct scientific investigations in the area of cellular structures and functions. ① Use appropriate instruments and proper techniques for carrying out practical work (e.g. preparation of temporary mounts and microscopic examination). ① Make careful observations and accurate records (e.g. examine prepared slides or temporary mounts of tissues and make biological drawings). ② Be aware of the applications of biological knowledge of cells in society. ③ Be aware of the dynamic nature of biological knowledge (e.g. the understanding of cell membrane and sub-cellular organelles). ③ Be aware that biological knowledge and theories are developed through observations, hypotheses, experimentations and analyses (e.g. fluid mosaic model of cell membrane structure).

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>c. Movement of substances across membrane</p> <p>Diffusion, osmosis and active transport²</p> <p>Occurrence of phagocytosis in cells</p>	<ul style="list-style-type: none"> • Account for the movement of substances across membrane using the concepts of diffusion, osmosis and active transport. • Apply the concept of osmosis to explain plasmolysis and haemolysis. 	<ul style="list-style-type: none"> • Perform practical work to study osmosis at cellular, tissue or organ levels. • Examine live cell images of the processes involved in the movement of substances across membrane. 	<ul style="list-style-type: none"> ① Make careful observations and accurate records (e.g. examine prepared slides or temporary mounts of tissues and make biological drawings). ① Identify and explain the importance of control variables in scientific investigations (e.g. the study of osmosis).
<p>d. Cell cycle and division</p> <p>Stages of cell cycle³</p> <ul style="list-style-type: none"> • Cell growth, nuclear division and cytoplasmic division <p>Nuclear division</p> <ul style="list-style-type: none"> • Mitosis • Meiosis⁴ 	<ul style="list-style-type: none"> • Recognise the various stages of cell cycle. • Understand the importance of cell division in growth and reproduction. • Outline and compare the processes of mitosis and meiosis. 	<ul style="list-style-type: none"> • Observe and identify the different stages of mitosis and meiosis, using prepared slides, photomicrographs or live cell images. 	<ul style="list-style-type: none"> ① Make careful observations and accurate records (e.g. examine prepared slides and make biological drawings). ② Recognise that the development of microscopic technology and imaging technology may lead to the advancement of biological knowledge.

² Detailed mechanism of active transport is not the learning and assessment focus.

³ Details of cell cycle are not the learning and assessment focus.

⁴ Crossing over is a feature of meiosis.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>e. Cellular energetics</p> <p>Metabolism: catabolism and anabolism</p> <ul style="list-style-type: none"> • Occurrence of catabolic and anabolic processes in cells <p>Enzymes and enzymatic reactions</p> <ul style="list-style-type: none"> • Properties and roles of enzyme • Active site and specificity • Factors (temperature, pH and inhibitors) affecting the rate of enzymatic reactions⁵ • Application of enzyme in everyday life <p>Photosynthesis</p> <ul style="list-style-type: none"> • Site of photosynthesis <ul style="list-style-type: none"> – Leaves and chloroplasts • Requirements for photosynthesis <ul style="list-style-type: none"> – light, carbon dioxide, water and chlorophyll 	<ul style="list-style-type: none"> • Distinguish between catabolic and anabolic processes. • Recognise the properties of enzyme and its roles in metabolism. • Explain enzyme specificity in terms of active site. • Explain the effects of factors on the rate of enzymatic reactions. • Understand the significance of photosynthesis. • Relate the structures of leaves and chloroplasts to their functions in photosynthesis. 	<ul style="list-style-type: none"> • Perform practical work to demonstrate the breaking down or building up action of enzymes. • Design and perform investigations to study the effects of temperature, pH or inhibitors on the activities of enzymes, and to find out some commercial applications of enzymes (e.g. bioactive washing powder and meat tenderiser). • Examine the morphology and the internal structure of leaves, and the photomicrographs or live cell images of chloroplasts. • Perform practical work to identify the photosynthetic products. 	<ul style="list-style-type: none"> ① Identify and explain the importance of control variables in scientific investigations (e.g. the study of enzymatic activities). ② Be aware of the applications of biological knowledge of enzymes in society. ① Identify and explain the importance of control variables in scientific investigations (e.g. the study of photosynthesis).

⁵ Modes and mechanism of enzyme inhibition are not the learning and assessment focus.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<ul style="list-style-type: none"> • Photochemical reactions <ul style="list-style-type: none"> – light absorption⁶ – photolysis of water for the generation of NADPH – generation of ATP • Carbon fixation: Calvin cycle⁷ <ul style="list-style-type: none"> – Carbon dioxide fixation and formation of 3-C compound – Reduction of 3-C compound leading to the formation of glucose – Regeneration of carbon dioxide acceptor • Conversions of photosynthetic products into other biomolecules • Factors (light intensity and carbon dioxide concentration) affecting the rate of photosynthesis 	<ul style="list-style-type: none"> • Outline the major steps of photochemical reactions and carbon fixation. • Understand the dependence of carbon fixation to the photochemical reaction. • Explain the effects of environmental factors on the rate of photosynthesis. 	<ul style="list-style-type: none"> • Design and perform investigations to study the effects of environmental factors (e.g. light intensity and carbon dioxide concentration) on the rate of photosynthesis. • Interpret, analyse and evaluate data relating to investigations on photosynthesis. • Search for information to compare the photosynthetic rates and productivities in different climatic areas, and to understand scientists' work related to photosynthesis. • Conduct a project on how a greenhouse works in enhancing plant growth. • Use animations to study the processes of photosynthesis. 	<ul style="list-style-type: none"> ② Recognise that the development of microscopic technology and imaging technology may lead to the advancement of biological knowledge. ③ Recognise the contributions of various people (e.g. Melvin Calvin) to developments in biology. ③ Be aware of the dynamic nature of biological knowledge (e.g. the understanding of cellular processes).

⁶ Photosystem is not the learning and assessment focus.

⁷ The following contents are not the learning and assessment focus: detailed biochemical reactions, names and structural formula of the intermediate biomolecules, concept of oxidation number.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>Respiration⁸</p> <ul style="list-style-type: none"> • Sites of respiration <ul style="list-style-type: none"> – Cytoplasm and mitochondrion • Glycolysis <ul style="list-style-type: none"> – Breakdown of glucose to 3-C compound (triose phosphate) – Oxidation of triose phosphate to pyruvate – Production of NADH and ATP • Aerobic pathway <ul style="list-style-type: none"> – Conversion of pyruvate to acetyl-CoA – Outline of Krebs cycle <ul style="list-style-type: none"> ▪ Combination of acetyl-CoA with a 4-C compound to form a 6-C compound ▪ Regeneration of 4-C compound with the release of carbon dioxide ▪ Production of NADH, FADH and ATP 	<ul style="list-style-type: none"> • Understand the significance of respiration. • State the role of ATP in energy transfer. • Outline the major steps of glycolysis, aerobic and anaerobic pathways. 	<ul style="list-style-type: none"> • Examine the photomicrographs or live cell images of mitochondria. • Design and perform investigations to study aerobic and anaerobic respiration in organisms. • Interpret, analyse and evaluate data relating to investigations on respiration. • Discuss the application of anaerobic respiration in the food industry. • Search for information to understand scientists' work related to cellular respiration. • Use animations to study the processes of respiration. 	<ul style="list-style-type: none"> ① Identify and explain the importance of control variables in scientific investigations (e.g. the study of respiration). ② Recognise that the development of microscopic technology and imaging technology may lead to the advancement of biological knowledge. ② Be aware of the applications of biological knowledge of cells and molecules of life in society. ③ Recognise the contributions of various people (e.g. Sir Hans Krebs) to developments in biology.

⁸ The following contents are not the learning and assessment focus: detailed biochemical reactions, names and structural formula of the biomolecules, concept of oxidation number.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<ul style="list-style-type: none"> – Oxidative phosphorylation <ul style="list-style-type: none"> ▪ Regeneration of NAD and FAD ▪ Formation of ATP • Anaerobic pathway <ul style="list-style-type: none"> – Formation of lactic acid in muscle cell – Formation of ethanol and carbon dioxide in yeast • Industrial applications of anaerobic respiration 	<ul style="list-style-type: none"> • Be aware of the occurrence of anaerobic respiration during exercise. • Distinguish between aerobic and anaerobic respiration. • Be aware of the interconversions of biomolecules through biochemical pathways. • Compare the processes of respiration and photosynthesis. 		

COMPULSORY PART II. Genetics and Evolution

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>a. Basic genetics</p> <p>Mendel's laws of inheritance</p> <p>Inheritance in humans¹</p> <ul style="list-style-type: none"> • Multiple alleles: ABO blood groups • Sex linkage • Sex determination 	<ul style="list-style-type: none"> • Understand the law of segregation and law of independent assortment. • Apply Mendel's laws of inheritance to solve genetic problems². • Understand the inheritance of ABO blood groups and sex-linked traits. • Recognise the role of sex chromosomes in sex determination of humans. 	<ul style="list-style-type: none"> • Read articles about how Gregor Mendel contributed to the study of genetics. • Use computer simulations and other materials (e.g. genetic corn) to study patterns of inheritance. 	<ul style="list-style-type: none"> ① Make careful observations and accurate records. ① Use diagrams and physical models as visual representations of phenomena and relationships arising from the data (e.g. genetic diagrams). ② Be aware of the application of knowledge of basic genetics in society and its social, ethical and economic implications. ③ Recognise the contributions of various people (e.g. Gregor Mendel) to the understanding of genetics and evolution. ③ Be aware that biological knowledge and theories are developed through observations, hypotheses, experimentations and analyses (e.g. Mendel's work).

¹ Codominance, incomplete dominance and linkage are not the learning and assessment focus.

² The learning and assessment focus is confined to solving genetic problems involving monohybrid cross.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>Pedigree analysis</p> <p>Variations in characteristics</p> <ul style="list-style-type: none"> • Continuous variation • Discontinuous variation • Causes of variation <ul style="list-style-type: none"> – hereditary information – environmental factors – mutation 	<ul style="list-style-type: none"> • Analyse pedigree to study the inheritance of characteristics. • Explain the causes of different types of variations in characteristics. 	<ul style="list-style-type: none"> • Construct and/or analyse a pedigree of the inheritance of some human traits (e.g. haemophilia, tongue rolling and ear lobes). • Observe and analyse variations in humans (e.g. height and tongue rolling). 	<p>① Classify, collate and display both first and second hand data (e.g. construct a pedigree of the inheritance of some human traits).</p> <p>① Make careful observations and accurate records (e.g. observe variations in humans).</p>
<p>b. Molecular genetics</p> <p>Chromosomes, genes and nucleic acids</p> <p>Gene expression and protein synthesis</p> <ul style="list-style-type: none"> • transcription³ and translation⁴ 	<ul style="list-style-type: none"> • Describe the structural and functional relationships of chromosomes, genes and nucleic acids. • Outline the process of protein synthesis. 	<ul style="list-style-type: none"> • Construct models of DNA and RNA. • Read about the work of some biologists (e.g. James Watson and Francis Crick) in the discovery of DNA. 	<p>① Use diagrams and physical models as visual representations of phenomena and relationships arising from the data (e.g. DNA model).</p> <p>② Be aware of the application of knowledge of molecular genetics in society and its social, ethical and economic implications.</p>

³ Detailed process of transcription is not the learning and assessment focus. Limit to the concepts of template strand and base pairing.

⁴ Detailed process of translation is not the learning and assessment focus. Limit to the concepts of codon and anticodon.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>Mutation</p> <ul style="list-style-type: none"> • Chromosome mutation (e.g. Down syndrome) and gene mutation (e.g. Sickle-cell anaemia) • Spontaneous and induced mutation • Causes of mutation (e.g. radiation and chemical) <p>Biotechnology</p> <ul style="list-style-type: none"> • Recombinant DNA technology⁵ • DNA fingerprinting⁶ • Human Genome Project (HGP) and its implications 	<ul style="list-style-type: none"> • Distinguish between chromosome and gene mutation. • Recognise the applications of recombinant DNA technology and DNA fingerprinting. • Recognise the contributions and limitations of the data obtained from the HGP. • Appreciate the joint efforts of scientists in international genomics projects. 	<ul style="list-style-type: none"> • Examine photomicrographs of karyotypes of chromosome mutation. • Search for information on the sources of mutagenic agents and their effects on human health. • Use audiovisual materials to illustrate the processes of recombinant DNA technology and DNA fingerprinting. • Perform practical work to extract DNA from living tissues (e.g. onion tissues), and to separate DNA fragments by gel-electrophoresis. • Search for information on the use of DNA fingerprinting in forensic science. • Make a chart or create a timeline of the discoveries that have arisen from the HGP. 	<ul style="list-style-type: none"> ③ Be aware of the dynamic nature of biological knowledge (e.g. from basic genetics to molecular genetics). ③ Recognise the contributions of various people (e.g. James Watson, and Francis Crick) to the understanding of genetics. ① Use appropriate instruments and proper techniques for carrying out practical work on molecular genetics (e.g. DNA extraction and gel-electrophoresis). ② Be aware that societal needs have led to technological advances (e.g. recombinant DNA technology and DNA fingerprinting). ② Appreciate the contribution of the Human Genome Project (HGP) and the application of biotechnology to humans and society. ② Explain how the knowledge of

⁵ Detailed mechanism of recombinant DNA technology is not the learning and assessment focus. Recombinant DNA technology involves restriction and ligation.

⁶ Detailed mechanism of DNA fingerprinting is not the learning and assessment focus.

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
			<p>biotechnology may lead to the development of new technologies and how new technologies may lead to further understanding of inheritance.</p> <p>③ Appreciate the advancement of the study of genetics from traditional breeding experiments to molecular experimentation and analysis.</p>
<p>c. Biodiversity and evolution</p> <p>Diversity of life forms</p> <p>Classification of organisms</p> <ul style="list-style-type: none"> • Need for classification 	<ul style="list-style-type: none"> • Appreciate the existence of various life forms in the world, and the different ways through which organisms adapt to their habitats. • Be aware that modern classification is based on the phylogenetic relationships of organisms. • Recognise the use of classification systems and binomial nomenclature. • Construct and use dichotomous keys to identify unknown organisms. 	<ul style="list-style-type: none"> • Visit a herbarium, country park or special area (e.g. Lions Nature Education Centre, and Tai Po Kau Nature Reserve). • Use specimens, audiovisual materials, games, etc. to study the diversity of organisms, and their ways of life. • Classify organisms into major categories according to a classification system. 	<p>① Make careful observations and accurate records (e.g. observe distinguishing features for identifying organisms).</p> <p>② Appreciate the role of science and technology in understanding the complexity of life forms and their genetics.</p>

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<ul style="list-style-type: none"> • Classification approaches proposed by Carl Woese <ul style="list-style-type: none"> – Six kingdoms (Eubacteria, Archaeobacteria, Protista, Fungi, Plantae and Animalia) – Three domains (Bacteria, Archaea and Eukarya) <p>Origins of life</p>	<ul style="list-style-type: none"> • Classify organisms into six kingdoms. • Appreciate that classification systems are subject to change when new evidence appears. • Appreciate that there are various explanations for the origins of life. 	<ul style="list-style-type: none"> • Search for information on other classification systems, and binomial naming of some organisms. • Construct and use dichotomous keys to identify organisms from a local habitat. • Read about the work of Carl Linnaeus and his system of naming organisms. • Discuss the advantages and limitations of different classification systems, and why the classification of some organisms has been changed over time. • Read about the different explanations for the origins of life, and the work of some biologists (e.g. Jean Baptiste Lamarck, Charles Darwin and Sir Alfred Russel Wallace) on evolution. 	<p>③ Be aware of the dynamic nature of biological knowledge (e.g. the development of classification systems).</p> <p>① Formulate and revise scientific explanations and models using logic and evidence (e.g. use of fossil records as evidence for evolution).</p> <p>② Understand how science has been influenced by societies (e.g. various views on the origins of life and evolution).</p>

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>Evolution</p> <ul style="list-style-type: none"> • Origin of species • Speciation <ul style="list-style-type: none"> – genetic variation – isolation⁷ • Mechanism of evolution <ul style="list-style-type: none"> – natural selection • Evidence of evolution (e.g. fossil record) 	<ul style="list-style-type: none"> • Relate speciation to evolution. • Outline the mechanism of evolution. • Be aware of the limitations of using fossil record as evidence of evolution, and the presence of other evidence. 	<ul style="list-style-type: none"> • Use computer simulations or other simulations to model natural selection. 	<p>③ Recognise the contributions of various people (e.g. Charles Darwin, Sir Alfred Russel Wallace and Jean Baptiste Lamarck) to the understanding of evolution.</p>

⁷ Details of different types of isolation are not the learning and assessment focus.

COMPULSORY PART III. Organisms and Environment

Students should learn	Students should be able to	Suggested Learning and Teaching Activities	Curriculum Emphases ①Scientific Inquiry ②STSE Connections ③Nature and History of Biology
<p>a. Essential life processes in plants</p> <p>Nutrition in plants</p> <ul style="list-style-type: none"> • Plants as autotrophs • Photosynthesis* • Need for minerals¹ • Absorption of water and minerals <p>Gas exchange in plants</p> <ul style="list-style-type: none"> • Occurrence of gas exchange in different parts of plant • Gas exchange in leaves 	<ul style="list-style-type: none"> • Appreciate the significance of plants as autotrophs. • Explain the need for minerals in plants. • Relate the structure of roots to their functions in water absorption. • Relate the features of leaves to gas exchange and prevention of water loss. • Explain the effects of light intensity on gas exchange in plants. 	<ul style="list-style-type: none"> • Design and perform investigations to study the effects of different minerals on plant growth using potted plants. • Examine the structure of the root of young seedlings using live specimens or prepared slides. • Design and perform investigations to study the effects of light intensity on gas exchange in land or water plants using hydrogencarbonate indicator solution or data loggers. • Design and perform investigation to compare the distribution of stomata 	<ul style="list-style-type: none"> ① Make careful observations and accurate records (e.g. examine prepared slides or temporary mounts of roots, stems and leaves, and make biological drawings). ① Ask relevant questions, identify problems and formulate hypotheses for investigations related to life processes. ① Plan, conduct and write reports on scientific investigations in areas of life processes. ① Identify and explain the importance of control variables in scientific investigations (e.g. the study of the effects of different minerals on plant growth). ① Use appropriate instruments and proper techniques for carrying out practical work (e.g. preparation of temporary mounts and microscopic examinations). ② Analyse ways in which scientific and
